# T. GURU HEMANTH

## DevOps & Cloud Platform Engineer

Tirupati / Chennai, India • +91 7993393713 • guruhemanth0@gmail.com • linkedin.com/in/guruhemantht • github.com/guruhemanth • guruhemanth.github.io

## PROFESSIONAL SUMMARY

DevOps & Cloud Platform Engineer with **3+ years of production experience** specializing in multi-cloud infrastructure automation, Kubernetes orchestration, and DevSecOps engineering. Proven track record provisioning resilient clusters across **AWS (EKS)** and **Azure (AKS)** using **Terraform**, implementing automated **Jenkins & GitHub Actions** pipelines, and leading the production live migration of **200,000+ enterprise users** with zero defects. Expertise in container security hardening (Trivy, Semgrep, Gitleaks), Prometheus/Grafana observability, and administering mission-critical PKI/MFA systems with 99.9% uptime SLA.

## TECHNICAL COMPETENCIES

| | |
|---|---|
| **Cloud Platforms** | AWS (EKS, EC2, VPC, S3, IAM, ECR, Route53, ALB), Microsoft Azure (AKS, ACR, VNets, NSGs, Managed Identities) |
| **Containers & K8s** | Kubernetes (EKS, AKS, KinD, Helm 3, Ingress, Pods, Deployments, ReplicaSets, PVC/PV, HPA, Services, crictl, Containerd), Docker, Docker Compose |
| **CI/CD & Automation** | Jenkins (Declarative Pipelines), GitHub Actions, Multi-stage Docker Builds, Automated Test Integration, Webhooks |
| **IaC & Configuration** | Terraform (Modular Architecture, State Locking, Providers), Ansible (Playbooks, Roles, Inventory) |
| **DevSecOps & Security** | Trivy (VAPT & Image Hardening), Gitleaks (Secrets Audit), Semgrep SAST, Bandit, PKI, MFA, OAuth 2.0 / JWT, OWASP Top 10 |
| **Monitoring & Logs** | Prometheus, Grafana (Dashboards & Metrics), Alertmanager, Wireshark, Burp Suite, Linux Performance Tuning |
| **Languages & Systems** | Python (Flask, Automation Scripting, REST APIs), Bash/Shell Scripting, Linux (Ubuntu, Debian, Fedora), Git, PostgreSQL |

## PROFESSIONAL PRODUCTION EXPERIENCE

### DevOps Engineer — Odyssey Technologies Limited

**Jul 2024 – Present** | Chennai, India

- Provisioned high-availability **Azure AKS clusters**, private ACR registries, VNet peering with strict NSG firewalls, and an SSH Jumpbox using modular **Terraform IaC**.
- Configured **AcrPull Managed Identity** for secretless container pulls and set up ProxyJump tunneling to private VMSS worker nodes, enforcing zero-trust network boundaries.
- Architected two-tier containerized microservices (Python Flask HA frontend with Azure Load Balancer, isolated Node.js backend) with internal CoreDNS discovery.
- Engineered a 5-stage declarative **Jenkins CI/CD pipeline** automating multi-stage Docker builds, vulnerability scans, and rolling Kubernetes updates, slashing deployment cycles from **30+ mins to <5 mins (85% reduction)**.
- Automated deployment workflows via production Bash and Python scripts, eliminating 95% of manual operational errors across **30+ enterprise client environments**.
- Developed DC-DR switchover validation checks and automated patch deployment pipelines with immediate rollback capability, minimizing business failover downtime.

### Trainee Engineer — Odyssey Technologies Limited

**Jun 2023 – Jun 2024** | Chennai, India

- Administered clustered **PKI-based Multi-Factor Authentication (MFA) reverse proxies** and load balancers serving 100,000+ active users with a **99.9% uptime SLA** and zero critical outages.
- Executed the live production migration of **200,000+ enterprise users** from legacy systems with 100% data integrity and zero defect rate.
- Conducted **50+ vulnerability & penetration tests** using Burp Suite and Wireshark in alignment with OWASP guidelines, reducing security incidents by 60%.
- Performed load and stress testing with Apache JMeter for systems supporting **10,000+ concurrent connections**, identifying resource bottlenecks and improving API response times by 35%.
- Integrated enterprise REST and SOAP APIs across 15+ client platforms supporting 50,000+ daily transactions with complete technical documentation and SLA adherence.

## KEY INFRASTRUCTURE & CLOUD PROJECTS

**Cloud-Native 2FA Microservices Infrastructure on Azure AKS** — Terraform • Azure AKS • ACR • Jenkins • Docker • Flask • Node.js

- Designed and implemented an end-to-end automated cloud-native infrastructure on Microsoft Azure using Terraform modules for reproducible environment provisioning.
- Configured multi-replica Kubernetes Deployments with Horizontal Pod Autoscalers (HPA), ClusterIP internal communication, health/readiness liveness probes, and Azure Load Balancers.
- Established secretless Azure Active Directory (AAD) pod identity authentication and private container networking across segmented virtual subnets.
- Delivered zero-downtime rolling release strategies integrated directly into declarative Jenkins pipelines with automated rollback on failure.

**Automated 7-Stage DevSecOps Pipeline on AWS EKS** — AWS EKS • Docker • Trivy • Semgrep • Gitleaks • Jest • PostgreSQL

- Engineered a 7-stage CI/CD DevSecOps pipeline with automated security quality gates enforcing a strict policy of **0 High/ Critical CVEs** prior to production release.
- Integrated Gitleaks secret detection, Semgrep OWASP SAST static code analysis, and Trivy container vulnerability scanner into automated build triggers.
- Provisioned ephemeral PostgreSQL 16 database containers inside Docker-in-Docker to execute comprehensive integration test suites with zero database flakiness.
- Hardened multi-stage Docker container images by purging build-time utilities, reducing attack surface and container footprint by over 60%.

**Enterprise High-Throughput Edge Caching & Microservices Architecture** — AWS CloudFront • ECS Fargate • ALB • PostgreSQL RDS • Redis Caching

- Architected global edge distribution via CloudFront CDN and Application Load Balancer terminating TLS 1.3 with automated certificate renewal.
- Deployed containerized backend services on private AWS ECS Fargate clusters isolated behind NAT Gateways with fine-grained IAM task execution roles.
- Configured air-gapped PostgreSQL relational database instances with automated snapshots, encryption at rest (KMS), and multi-AZ failover resilience.

## AI-AUGMENTED DEVOPS & MODERN ENGINEERING PRACTICES

- **Autonomous Agent Workflows:** Utilizes autonomous coding agents (Google Antigravity) to decompose multi-repo tasks, accelerate shell scripting, and automate CI/CD pipeline configurations.
- **Private On-Prem LLMs:** Leverages self-hosted local models (Ollama) for zero-latency, private log analysis, regex generation, and incident triage without leaking proprietary network topologies or credentials.
- **Continuous Reliability Engineering:** Applies Chaos Engineering principles, automated smoke tests, and post-incident root-cause analysis (RCA) to drive continuous platform reliability.

## EDUCATION & ACADEMIC CREDENTIALS

**Bachelor of Engineering (B.E.) in Electronics & Communication Engineering** — CGPA: 8.54 / 10
Panimalar Institute of Technology, Chennai, Tamil Nadu — 2019 – 2023

**Intermediate (Board of Intermediate Education, B.I.E.) — MPC** — CGPA: 8.73 / 10
Srichaitanya Junior College, Andhra Pradesh — 2017 – 2019

## COMMUNICATION & ADDITIONAL DETAILS

| | |
|---|---|
| **Languages** | English (Professional Working Proficiency), Telugu (Native), Hindi (Conversational), Tamil (Conversational) |
| **Work Authorization** | Indian Citizen • Open to Onsite (Chennai / Bangalore / Hyderabad / Pan-India), Hybrid, or Remote roles |
